Welcome from the Organising Committee

Dear participants,

The Hong Kong Polytechnic University (PolyU) in collaboration with the Educational Development Centre and the eLearning Advocates representing all Faculties and Schools are pleased to welcome you to the Teaching and Learning Innovation Symposium 2010 in Hong Kong.

This Symposium is organized as part of the 3C Project. The 3C project is a two year institutional initiative at Hong Kong Polytechnic University funded by the Vice President (Academic Development) in support of PolyU’s Strategic Plan 2008/09-2011/12. The broad aim of the 3C Project is to enhance the (e)Learning / Blended Learning culture at PolyU.

The Teaching and Learning Innovation Symposium is both a local and international forum for practitioners, researchers and policy-makers from all sectors to explore, reflect, collaborate and learn from each other. The key question here is how pedagogically led technology practices can contribute sustainable and meaningful change to teaching and learning within a University context and how to prepare students for living and working in a digital world.

The Teaching and Learning Innovation Symposium main program features two inspiring keynote lectures, presentations of submitted short papers and ‘works in progress’ and a series of poster presentations. There are also a number of social and networking events and five innovative workshops scheduled as part of the Pre- and Post-Symposium events respectively.

We hope that during the symposium we will be able to meet each of you and personally thank you for participating. Together we will build a unique learning opportunity.

On behalf of the Organising Committee
Acknowledgements

We would like to take this opportunity to acknowledge and express thanks to our sponsors and supporters;

- The Office of the Vice President Academic Development
- The eLearning Advocates representing all Faculties and Schools at The Hong Kong Polytechnic University
- Apple Asia Education
- Art Group Limited
- McGraw-Hill Education
- Adobe

Also, my heartfelt thanks to the colleagues in eLDSS, EDC and the 3C team without whom this Symposium would not have been possible. In particular Ms. Karen Chan, Mr Edward Tse, Ms. Carmen Law, Mr Gary Cheung, Dr. Christine Armatas and Dr. Panos Vlachopoulos.

Regards,

Short Paper 3

THE MULTIPLES USES OF THE EPORTFOLIO IN SECOND-LANGUAGE EDUCATION

Thierry Karsenti, Simon Collin
University of Montreal
Montreal / Canada
thierry.karsenti@umontreal.ca, simon.collin@umontreal.ca

Abstract

Originally used in artistic circles, the portfolio has gained considerable ground in the education field, where it serves a multitude of functions, both academic and professional. It is also a rapidly evolving tool, notably due to advances in Web 2.0 technology that have opened the way to new pedagogical potentials. The portfolio is also prominent in second-language teaching and learning programs, as witnessed by the European Language Portfolio (ELP), which was developed and piloted by the Council of Europe and is used as a support tool in line with the Common European Framework of Reference for Languages (CEFR). In this context, we present Eduportfolio, a flexible electronic portfolio that can be adapted to a variety of educational contexts, including second language (L2) education. We draw a portrait of the portfolio in education, including the advantages of the electronic version. We then present Eduportfolio along with some empirical results to illustrate eportfolio use in French second language (FSL) teaching and learning.

Keywords: Eportfolio, FSL teaching and learning.

Introduction

This paper presents Eduportfolio, a flexible electronic portfolio that can be adapted to a variety of educational contexts, including second language (L2) education. Eduportfolio is a multilingual, free-access eportfolio (French, English, Spanish, Catalan, Arabic, and Greek) that teachers can use to facilitate the integration of Information and Communication Technology (ICT) into education. At the same time, it allows L2 learners to benefit from using an electronic portfolio in their schoolwork. We begin by outlining the various functions that the portfolio generally provides in education, and particularly for L2 teaching and learning. We then introduce Eduportfolio and cite the advantages of the eportfolio over the paper portfolio. Finally, we describe the specific functions of Eduportfolio and present some results demonstrating eportfolio use in French second language (FLS) teaching and learning.

The Portfolio In Education

This section presents a general overview of the portfolio, including its functions in education, and more specifically, its pedagogical use in L2 classes.

Functions of the portfolio in education

The portfolio originated in artistic circles, the idea being that artists could get their works exhibited by presenting a set of representative examples. It was first applied to education in the early 1980s by P. Elbow and P. Belanoff (State University of New York, Stony Brook) as an alternative to standardized tests [1]. Since then the portfolio has been expanded to a multitude of functions. The main ones are presented below.
Teaching and Learning Innovation Symposium 2010

- Exposure function: The educational portfolio showcases students' learning and progress with examples of their schoolwork [2]. Its progressive nature allows insight into both learning processes and outcomes [3] [4], as it represents the student's learning path. This function can also be exploited professionally: job candidates can show potential employers how their skills have developed [5].

- Assessment function: The portfolio is often used as a complementary assessment tool [6]. Because it provides access to both process and outcome, it can be used for ongoing formative as well as summative assessments. It also provides teachers with an additional source of information with which to confirm or moderate their judgement. Furthermore, the portfolio can be used as a self-assessment tool to foster learner autonomy and responsibility for the learning process [7], accompanied by a self-assessment grid.

- Reflective function: The above-mentioned self-assessment function is part of the reflective function, whereby students adopt a critical attitude toward their learning [6]. Aside from the use of predetermined self-assessment grids, reflection on the learning process can be fostered through frequent writing of "feedback" reports (e.g., "What I have learned," "My strengths and weaknesses," "If I could do it over") [2]. Moreover, students must exercise their reflective capacity to select the most representative examples of their learning. The portfolio therefore departs from an archival record in that students continuously input relevant and representative content.

- Social function: The portfolio also provides a social function when it acts as a mediation tool between learners, teachers, and parents. Importantly, it enables parents to gain a better understanding of their child's learning path, which may encourage them to get more involved in the process. Note that the paper version does not provide this social function, which emerged with the technological advance of the electronic portfolio, and is therefore specific to the eportfolio.

Pedagogical use of the portfolio in L2 class

The above-presented functions demonstrate that the portfolio is a tool with strong potential to support learning in any subject, and particularly L2. It allows students to review their progress in second-language learning. Moreover, this can be done in the second language, through writing, which particularly helps students reflect on their learning [8]. Thus, students can reflect on their advancement in L2 while working in that linguistic mode.

There are many ways to organize portfolio content. For example, the European Language Portfolio (for a more detailed description of the ELP, see [9] and [10]) comprises three parts: the Language Passport, which provides an overview of the individual's proficiency in different languages at a given point in time in terms of the common reference levels; the Language Biography, which provides a multilingual perspective on the learner's experience with different languages; and the Dossier, where the learner documents examples of personal works to illustrate the competencies listed in the Language Passport and Language Biography. Note that these three parts can be combined in various forms and used at various times throughout the L2 program.

Other content organizations are equally possible. Among others, it could be advantageous to arrange the portfolio according to assessments of second-language notions. For example, following the competency-based approach used in Canada, a student's portfolio could be organized to reflect the different competencies specified in the L2 program. Students could then select accomplishments that are directly related to the required competencies. This would also make it easier for teachers to assess the different competencies.
Présentation Of Eduportfolio

This section deals with the more technical aspects. The advantages of the eportfolio over the paper portfolio are presented, and the specific functions of Eduportfolio are described.

Advantages of the eportfolio

The electronic portfolio has a number of distinct advantages over the paper portfolio, as outlined below:

- Greater social function: Because it usually includes a “comments” function, the eportfolio enables greater communication between students and other parties in the education process (teachers, parents, other students), which provides opportunities for feedback. This increases the social function of the portfolio and adds the potential to set up learning communities. The cyberportfolios of the Institut St-Joseph are an excellent example of the role that the eportfolio can play in a learning community. Similarly, Eduportfolio has several network functions that support this type of collaboration.

- Flexibility of content organization: The electronic portfolio also allows flexible content organization, which in turn fosters portfolio evolution. In other words, this flexibility means that learners can adapt their portfolios to their learning path, adding new sections and changing old ones as they go along. In this respect, paper portfolios such as the European Language Portfolio are limited in that they require all learners to adhere to the same content organization, and for the entire duration of their L2 program. However, it is arguable that a preschool and a secondary school student might not have the same needs in terms of content organization. The same holds true for beginner and advanced students.

- Flexibility of content: Aside from flexibility of content organization, the eportfolio also provides flexibility of the content itself. For example, using a computer, one can delete, replace, cut and paste, and correct texts as desired, all without hindering the readability. This de-linearization of the writing process, which is typical of word processing, has a significant impact on L2 teaching and learning, because learners can review their work to their heart’s content and publish a number of versions of the same text to track their progress longitudinally.

- Enormous storage capacity: The eportfolio typically has enough storage capacity to host a vast number of texts that are nonetheless simple to manage. To illustrate, Eduportfolio provides an initial 100 Mo of storage space. In contrast, a voluminous paper portfolio would be heavy, unwieldy, and possibly confusing. In this sense, the eportfolio appears to have the long-term advantage.

- Aesthetics: The eportfolio is an aesthetic tool owing to two features that paper portfolios generally lack: (1) first, it usually offers a wide choice of templates, colours, and images, for plenty of style options; and (2) as mentioned above (content flexibility), writing on a computer produces texts that are uniform and legible, for consistent readability.

- Accessibility: When the eportfolio is posted online, it provides universal access, as long there is an Internet connection. Unfortunately, this is the portfolio’s one major inconvenience: unlike the paper version, it requires technological support. In other words, the eportfolio can be used only in L2 classrooms where students have access to computers and the Internet.

Functions of Eduportfolio

Now that we have looked at the advantages of the eportfolio over the paper portfolio, we can turn to the main functions of Eduportfolio, in addition to those listed immediately above. Eduportfolio is a free-access, multilingual electronic portfolio that is specifically designed for educational purposes. Instead of following a predefined content organization, users can structure the content by section and subsection, adding texts and documents as desired. Because the content organization varies according to the portfolio, each Eduportfolio Home page includes a Page list and navigation buttons. This allows readers to quickly view the portfolio’s contents using different and complementary functions, as shown in Fig. 1.

---

1 For a definition of learning communities, see [11].
Teaching and Learning Innovation Symposium 2010

To protect their identity and confidentiality, authors can block access to specific sections and subsections and require users to supply a password to view certain portfolio content. Note also that items on Eduportfolio can be published in a variety of formats (e.g., text, audio, video, PPT, image, graphics). This provides teachers and learners with a number of interesting L2 options, including written texts and oral productions using audio and video clips. Eduportfolio also has some of the most technologically advanced Web 2.0 functions: RSS feed, invitation function, chat system, and Twitter notification of new content. Eduportfolio offers still another advantageous feature: downloading static versions of the portfolio. A static version requires a computer to be read and printed out, but does not require Internet access. This partly redresses the previously mentioned accessibility limitation, and provides a particularly useful option for “transporting” a portfolio. Finally, apart from educational applications, Eduportfolio includes a portfolio manager so that teachers can group, manage, and access all their students’ portfolios on one site. in one place.

Results on the integration of Eduportfolio in initial teacher training programs

We conclude by presenting an overview of the results of a study on the pedagogical integration of Eduportfolio by teachers-in-training at the Université de Montréal, including those in FSL programs. The study was conducted in winter 2010 (December–March) using an online questionnaire (N=403) and semi-directed interviews (N=8) of students enrolled in an initial teacher training program. Below we present the quantitative results and draw a portrait of students’ perceptions towards the use of Eduportfolio in their teacher training program. We then present the qualitative results in the aim of gaining a deeper understanding of this portrait. We will limit ourselves to presenting the most relevant results on the pedagogical integration of Eduportfolio in second-language education.

First, we must stress that a consistent finding in this study (and in previous studies on other education programs) was the mandatory use of the eportfolio. Indeed, using Eduportfolio was an academic requirement for 82% of respondents (Fig. 2). On the other hand, support for learning, support for reflective practice, and professional visibility functions varied widely among respondents. Thus, respondents’ answers were relatively evenly distributed (30–45%) for “Strongly agree–Agree,” “Neutral,” and “Strongly

63
agree—Disagree") for these three functions, which suggests rather diverse perceptions of Eduportfolio’s academic and professional potential.

![Bar chart showing percent distribution of responses for academic obligation, support for learning, support for reflective practice, and professional visibility.]

Based on these results, we hypothesize that future teachers will experience the use of Eduportfolio in very different ways, most probably due to different instructions on its use by their university professors. Another finding is that Eduportfolio was mainly perceived as an individual rather than collaborative tool (Fig. 3). This indicates that Eduportfolio’s collaborative potential, as mentioned in section 2.2, was underused.

![Bar chart showing percent distribution of responses for individual use and collaborative use.]

We therefore hypothesize that university professors do not direct their students to exploit the full interactional and social potential of Eduportfolio. This can be viewed as an unrealized gain in certain learning situations, particularly from a social constructivist perspective.

We turn now to the conditions for the pedagogical integration of Eduportfolio. In terms of curriculum implementation, a number of conditions are required for the effective use of Eduportfolio:
- Predefined pedagogical objectives: Before this tool is used in a language course, the pedagogical objectives should be determined. This step could be carried out by an education team, and should account for the school’s particular context.
- Complementarity with existing tools: It is equally important to ensure that the pedagogical integration of Eduportfolios is not redundant with tools that are already in place. Otherwise learners will fail to appreciate its educational value.
- Technical and pedagogical support for teachers: Because teachers play a primary role in the integration of Eduportfolios in language courses, they must be provided with the technical and pedagogical support they need to make good use of this approach.

Once Eduportfolios have been introduced into the curriculum, certain conditions are required so that learners can fully appreciate this tool:
- Pedagogical instruction for learners in the use of Eduportfolios: The eportfolio differs from other learning tools in the largely autonomous nature of the learning process. In addition to technical training in the use of Eduportfolios, it is therefore necessary to provide training in the unique way that this tool fosters learning. Moreover, this training should be provided over time (e.g., at the beginning of each session if Eduportfolios are used for several years) in order to guide learners as they familiarize themselves with the technical features and pedagogical potentials.
- Regular use and coaching in language courses: Due to its unique nature, the eportfolio gives better value in language courses if it is used regularly and with coaching. It is known that learning processes such as reflection and self-regulation—which the eportfolio particularly targets—are generally less developed in traditional, teacher-directed language programs. Moreover, to benefit from the full potential of Eduportfolios, learners must use it regularly and with coaching. This coaching can take many forms: self-assessment sheets, peer assessment, class and group presentations, scheduled meetings with teachers, and so on.

From this brief overview of the results we gather that the pedagogical integration of Eduportfolios, like any other educational tool, is subject to conditions of the curriculum as well as pedagogical conditions as such. These conditions are important to take into consideration so that learners can fully appreciate the educational value of Eduportfolios, and consequently fully benefit from its potential in second-language learning.

Conclusion
This paper presents Eduportfolios, an L2 teaching and learning tool. We described the functions of the portfolio in education, and more particularly in L2 teaching and learning. We then presented Eduportfolios, citing the advantages of the electronic portfolio over the paper portfolio and the specific advantages of Eduportfolios. While Eduportfolios promises to provide strong support for L2 teaching and learning, recent advances in teaching and technology suggest that it could do even more. One possible improvement would be to expand the social function, for example by including “eportfolio friends” or by making use of the available interaction modes (asynchronous and synchronous) to encourage students to form learning communities.
